Expanded group

Definition

An algebra (A, Ω) is called an *expanded group*, if there exist a binary operation +, a unary operation – and a constant 0 such that the retract (A, +, -, 0) is a group.

Definition

Let *A* be an expanded group. A polynomial $f(x_1, ..., x_k)$, with k > 1, is called *absorbing*, if, for all $1 \le i \le k$, and for all $a_j \in A$, with $1 \le j \le k$,

 $f(a_1,\ldots,a_{i-1},0,a_{i+1},\ldots,a_k)=0.$

Nilpotency

Definition

A subalgebra *I* an expanded group *A* is called an *ideal* if there exists an endomorphism φ of *A* such that $\varphi(a) = 0$ if and only if $a \in I$.

Definition

An expanded group A is *nilpotent* of *class* n if there exists a chain of ideals

$$0=I_0\leqslant I_1\leqslant\cdots\leqslant I_n=A,$$

.

such that $I_{j+1}/I_j \leq Z(A/I_j)$, for every $0 \leq j < n$.

Proposition

A commutative ring R is nilpotent of class n if and only if $R^{n+1} = 0$.

Nilpotency

Definition

Skew braces

Absorbing polynomials of a skew brace

Definition

An algebra $(A, +, \circ, 0)$ is called a *skew brace* if

- (*A*, +, 0) is a group
- (*A*, ∘, 0) is a group
- $a \circ (b + c) = a \circ b a + a \circ c$, for all $a, b, c \in A$.

We denote

$$x * y = -x + (x \circ y) - y$$

Observation

Absorbing polynomials for a skew brace are

- $[x, y]_{+}$
- $[x, y]_{\circ}$

• $x * y_i$

Skew braces

Absorbing polynomials of a skew brace

Definition

An algebra $(A, +, \circ, 0)$ is called a *skew brace* if

- (*A*, +, 0) is a group
- (*A*, ∘, 0) is a group
- $a \circ (b + c) = a \circ b a + a \circ c$, for all $a, b, c \in A$.

We denote

$$x * y = -x + (x \circ y) - y$$

Observation

Absorbing polynomials for a skew brace are

- $[x, y]_{+}$
- $[x,y]_{\circ}$

• x * y,

$$y * x$$
.

Absorbing polynomials of a skew brace

Definition

An algebra $(A, +, \circ, 0)$ is called a *skew brace* if

- (*A*, +, 0) is a group
- (*A*, ∘, 0) is a group
- $a \circ (b + c) = a \circ b a + a \circ c$, for all $a, b, c \in A$.

We denote

$$x * y = -x + (x \circ y) - y$$

Observation

Absorbing polynomials for a skew brace are

• $[x, y]_+,$ • $[x, y]_0,$ • y * x.

Center of a skew brace

Theorem (M. B. & P. J.)

Let B be a skew brace. Then

$$Z(B) = \{c \mid \forall a \in B : c + a = a + c = c \circ a = a \circ c\}.$$

Corollary

A skew brace B is abelian if and only if (B, +) is an abelian group and $a + b = a \circ b$, for all $a, b \in B$.

Skew braces

Other notions of nilpotency

Definitions (W. Rump; Ag. Smoktunowicz)

Let *B* be a skew brace. We define

$$B^{1} = B, \qquad B^{n+1} = B * B^{n},$$

$$B^{(1)} = B, \qquad B^{(n+1)} = B^{(n)} * B,$$

$$B^{[1]} = B, \qquad B^{[n+1]} = \left\langle \bigcup_{i=1}^{n} B^{[i]} * B^{[n+1-i]} \right\rangle_{+}$$

We say that B is

- left nilpotent if $B^n = 0$,
- right nilpotent if $B^{(n)} = 0$,
- *nilpotent* if $B^{[n]} = 0$,

for some $n \in \mathbb{N}$.

Relations among nilpotencies

Theorem (F. Cedó, T. Gateva-Ivanova, Ag. Smoktunowicz)

A brace is right nilpotent of class n if and only if its associated set-theoretic solution of Yang-Baxter equation is multipermutational of level n.

Proposition (M. B. & P. J.)

Let *B* be a skew brace. Then the following properties are equivalent:

- B is centrally nilpotent,
- B is a nilpotent brace and (B, \circ) is a nilpotent group,
- *B* is a right nilpotent brace and both (*B*, ∘) and (*B*, +) are nilpotent groups.

Relations among nilpotencies

Theorem (F. Cedó, T. Gateva-Ivanova, Ag. Smoktunowicz)

A brace is right nilpotent of class n if and only if its associated set-theoretic solution of Yang-Baxter equation is multipermutational of level n.
